THE INCREDIBLES

Team 3

https://github.com/diogofouto/team3-ccu-project

Second Assessment Grade: 17

Feedback:

Prototypes

The team explains the prototypes at length and the connections between each task — from the ideation stage and connected with the storyboards — and briefly introduces the tasks given to the users. The wireframes presented are developed around the design goals from the previous milestone and the prototypes presented in the low and mid-fidelity phases are well developed and appropriate for the tasks and the type of process of design.

User Evaluations

The team has used a Wizard of Oz approach in both stages of the evaluation. For the Low and Mid-Fidelity prototypes evaluation, the team presented the general problems users identified in the tests, sectioned by the tasks. For the Mid-Fidelity prototype The team did not expand on the protocols for the usability tests of the Low and Mid-Fidelity prototype.

Evaluation Plan

For the High-Fidelity prototype evaluation plan, the team has identified problems and features to be evaluated in the next stage, and expanded on the main goal in the archive. While the plan is not comprehensive, the team briefly mentions the protocol they want to use and which quantitative scales are going to be included in the post-test questionnaire.
